
Exercice 2

```
uses wincrt;
function cb(x:real;n:byte):string;
var ch:string;
    i:byte;
begin
    ch:='0.';
    for i:=1 to n do
    begin
        if 2*x<1
        then
            begin
                ch:=ch+'0';
                x:=2*x;
            end
        else
            begin
                ch:=ch+'1';
                x:=2*x-1;
            end;
    end;
    cb:=ch;
end;
begin
    write(cb(0.625,4));
end.
```

Exercice 3

```
uses wincrt;
var f1,f2:text;
function fact(n:integer):longint;
var f,i:longint;
begin
    f:=1;
    for i:=2 to n do
        f:=f*i;
    fact:=f;
end;
function ver(a,b:integer):boolean;
begin
    ver:=((fact(a)*fact(b)) mod(a+b)=a) or((fact(a)*fact(b)) mod(a+b)=b);
end;
procedure creation(var f1,f2:text);
var l,ch1,ch2:string;
    a,b,e:integer;
begin
    assign(f1,'source.txt');
    assign(f2,'resultat.txt');
    reset(f1);
    rewrite(f2);
    while not(eof(f1)) do
```

```

begin
readln(f1,l);
val(copy(l,1,pos(' ',l)-1),a,e);
val(copy(l,pos(' ',l)+1,length(l)),b,e);
if ver(a,b)
then
begin
str(a,ch1);
str(b,ch2);

l:=ch1+i*+ch2;
writeln(f2,l);
end;
end;
close(f1);
close(f2);
end;

```

```

begin
creation(f1,f2);
end.

```

```
